DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 07/27/2006 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chin (U.S. 5,591,183) in view of Michelson (U.S. 5,423,842).

Note in figures 7 and 8, Chin teaches the method steps as claimed by providing a long slender rod (700) with a handle (704) on a proximal end and distal end, wherein the distal end having a first **sideways** hook (708) and second **sideways** hook (710) extending from the rod (700) in an opposing direction from the first **sideways** hook (708); manipulating the rod (700) so as to slide the **sideways** hooks (708,710) around the artery (502); pushing and/or pulling the rod (700) to slide the **sideways** hooks (708,710) along the artery until the artery is separated

from the surrounding tissue (see figures 8A-8C and col. 8, lines 1-28); and furthermore, wherein the **sideways** hook (710) defines an arc which is inherently capable of being within about 180 to about 270 degree. Chin does not disclose a segment of the slender rod (700) being offsetting the hook (708) from a longitudinal axis defined by the rod (700).

However, Michelson teaches in figure 1 that it is known in the surgical art to have a long slender rod (10) with a handle (12) on one end, a sideways hook (32) on the other end, and a segment (28) of the slender rod (10) being offsetting the hook (32) from a longitudinal axis defined by the rod (10).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the Chin's segment of the slender rod being offsetting the hook from a longitudinal axis defined by the rod as taught by Michelson in order to provide an offset handle which will allow unobstructed visualization of the hook when operating on harvesting the artery.
